

MAE 6291

Internet of Things for Engineers

Prof. Kartik Bulusu, MAE Dept.

Week 13 [04/23/2025]

- Final presentations and demos
 - Advanced topics
 - Full stack development in the IoT space
 - Docker
 - Kubernetes – k3S, microK8s
 - Some light reading for the future
 - Future directions
- Docker example

git clone https://github.com/gwu-mae6291-iot/spring2025_codes.git

Full Stack Development for IoT technologies

- Embedded/firmware systems
- Communication technologies
- Networking protocol
- Sensor technology
- Custom-built hardware.

Advanced topics in IoT

Docker is a set of [platform as a service](#) (PaaS) products that use [OS-level virtualization](#) to deliver software in packages called [containers](#).

Kubernetes also known as **K8s** is an [open-source container orchestration](#) system for automating [software deployment](#), scaling, and management

The certified Kubernetes distribution built for IoT & Edge computing

IoT devices are everywhere...

- **1st industrial revolution:** 1760 to 1840 -> Railroads
- **2nd industrial revolution:** Late 19th century to 20th century -> Mass production and electricity
- **3rd industrial revolution:** 1960s -> Digital and revolution
- **4th industrial revolution:** NOW -> Ubiquitous and mobile communication

K. Schwab. The Fourth Industrial Revolution

Icon Source: IoT by Alla Zaleuska from [Noun Project](https://www.nounproject.com/)

IoT with edge computing capability is going to be the backbone of the Industry 4.0.

- You **explored** the **IoT** framework
- **Expanded** it with **edge computing** ideology
- **Gained** practical and hands-on **exposure** in “**μ-Labs**”

What's the “thing”?

Sources:
Calculator by Markus from <https://thenounproject.com/browse/icons/term/calculator/>
internet of things by Davo Sime from <https://thenounproject.com/browse/icons/term/internet-of-things/>
L. Bernardi, S. Sarma and K. R. Traub, The Inversion Factor: How to Thrive in the IoT Economy

Paradigm #1

- A **thing** is self-contained and only operates within the confines of its physical shell.
 - **Thing** carries out only those functions that its designer envisioned when it was fabricated.
- The **thing** contains a powerful computer inside but is completely hidden from the user.
- The **thing** has firmware (not called software).

Paradigm #2

Paradigm #3

How can you put what you learn into practice
